

We provide more than just medical care.

Landmark's care team supports the individual needs of the whole patient. Our patients have access to a range of specialized roles.

Health Care Ambassadors

Provide one-on-one, non-clinical interaction in the home and by phone, to help ensure Landmark provides optimal care for each patient's needs.

Social Workers

Work with patients and their families in the home to connect them with community resources and offer guidance on accessing benefits.

Dietitians

Help patients understand how food can impact overall health, including diet recommendations for their specific health conditions.

Nurse Care Managers

Serve as a point-of-contact for patients and caregivers by phone, check on patients between visits, and help patients navigate the healthcare system.

Pharmacists

Review medicines, answer questions and educate patients on how best to take their medication. Landmark pharmacists can help determine whether there are lower-cost options to a patient's current prescriptions.

Behavioral Health (Psychiatric NP or Psychiatrist)

Visit patients in their homes to assess needs and support ongoing treatment, provide short-term therapy, medication management and assess social needs.

Landmark provides care for the whole patient.

Beyond routine and urgent medical visits, we provide additional services.

Care Coordination

Landmark helps facilitate care from multiple sources and is able to make recommendations for added services such as physical therapy, home health nurses, and medical equipment.

Post-hospital Care

After a hospital or skilled nursing facility stay, patients risk readmission. Landmark helps avoid unnecessary readmissions by visiting patients at home to review discharge instructions and medications and coordinate follow-up appointments.

Pre-procedure Visits

We visit patients at home to review pre-procedure instructions, answer questions about the procedure, and plan for post-procedure support.

24/7 Phone Support

Patients can call Landmark 24 hours a day, 365 days per year, and talk to a medical professional about any medical question or concern, big or small.
